PHTHALATES / PLASTICIZERS

Phthalates are found everywhere. As a chemist you can hardly do an analysis without detecting them.

Phthalates and other plasticizers are used in vinyl products of everyday use to make them flexible. Plasticizers are one of those everyday miracles that have made the life easier for all of us. Vinyl polymers like PVC are hard and rigid substances, but thanks to the plasticizers they behave in a soft and flexible way when we buy them as finished products.

The annual consumption of plasticizers is in the order of 8 million metric tons. Approximately 80 % of all phthalates are used as plasticizers, and 70 % of all plasticizers used are phthalates. Nearly 90 % of all phthalates are used in vinyl plastic products.

As with several other industrial wonders, the phthalates are now associated with several health concerns, and guidelines on their use are enforced by governmental and international restrictions worldwide.

The scope of this catalogue:

Most common plasticizers are listed. Chiron offers both technical products (techn.), purified or specifically synthesized variants with purity normally above 98 %. We also offer mixes according to international methods or customized for our clients.

Mixed phthalates:

Mixed phthalates are phthalates with two different esters groups. These are offered as several of the symmetric esters are controlled and banned.

Traditional esterification methods leads to extensive transesterification. Chiron proprietary technology allows the synthesis of pure mixed phthalates without and ester transfer from one to another. Chiron is now offering a large number of mixed esters for checking the products for validity. Mixed esters are offered in this catalogue.

Internal standards:

Chiron offers a large range of deuterated standards. New internal standards are available at reasonable cost through custom synthesis.

Metabolites:

Phthalates are metabolized both, in vivo and in vitro, to monoesters and to metabolites where one or both of the ester groups are oxidized to various oxygen-containing products.

Phthalate mixtures:

Phthalate mixes are based on international methods and customer requirements.

CONTENTS

Introduction

Single compounds

- Deuterium labelled diphtalates (symmetric and mixed esters)	5
- Phthalates, symmetric and native	8
- Mixed phthalate esters	11
- Oxygen containing chained phthalates	13
- Deuterium labelled monophthalate esters (metabolites)	14
- Monophthalate esters (metabolites)	15
- Cyclohexane-1,2-dicarboxylic acid esters (Hexahydrophthalates)	16
- Adipates (linear C6-dicarboxylic esters)	17
- Industrial (technical) phthalates (also listed above)	18
- Phthalate based flame retardants	19

Phthalate mixes

- EPA 505, Phthalate and adipate esters in drinking water	20
- EPA 506, Phthalate esters in waste water	21
- EPA 8061A, Phthalate Esters in Sludge Matrices	22
- Phthalate calibration mixes	22
- Deuterated phthalate mixes (IS-mixes)	24
- Mixes of technical phthalate products	26
- Miscellaneous surfactant mixes, 2 to 20 compounds	27
